What you could do next

1. You can try out these ideas on your own in your classroom with your children. You could even develop your action research project to look at the effects of drama on your teaching and your children’s earning.
2. You could work with a colleague in a collaborative way and co-plan and co-teach to develop your confidence and techniques.
3. You could use drama as a formative assessment technique.
4. You could collect evidence of children’s understanding about science (and other subject areas) through drama.
5. You could get involved in our on-going project(s) to help teachers develop their drama skills and evaluate the impact through various research methods.
6. You could become part of our developing network of teachers who use drama in their science teaching.

Please get in touch if you would like further help, guidance or advice about any of the above.
